

Black Plastic Colour

Instructions:

1. To obtain an optimal result, the plastic surfaces have to be completely clean and dry. First clean the surfaces with a cleaning product, rinse the surfaces with water and let them dry completely.
2. Tape the contiguous surfaces to avoid contact with the dye during the application.
3. Wear gloves (supplied) while applying.
4. Shake the bottle well for 30 seconds.
5. Apply the product with the included sponge evenly onto the plastic surfaces.
6. In exceptional cases, a second coat may be required (only when the first coat has completely dried) to provide a perfect finished surface.

ATTENTION: Follow the application instructions! Do not apply on hot plastic or under direct sunlight. Avoid contamination with dust or dirt during the application.

HINT: If residue has bled onto unwanted surfaces, it can be easily removed with ethyl alcohol.
