

## Black Tyre Colour

### Instructions:

1. In order to achieve an optimum result, the tyre must be absolutely clean and dry. You should clean the tyre with a detergent and thoroughly rinse the tyre with water and allow it to fully dry.
2. You can cover the wheel rim with masking tape so it won't come into contact with the Tyre Colour during application.
3. Wear gloves (supplied) while applying.
4. Shake the bottle well for 30 seconds.
5. Use the provided sponge to apply the product evenly and thinly on the outer surface of the tyre wall. Do not apply on the tread of the tire. Work around the tyre until the entire tyre wall is treated.

**CAUTION:** Not suitable for two-wheelers! Do not apply on the tread of the tyre. Use according to instructions! Do not apply on hot surface or under direct sunlight. Avoid contamination with dust or dirt during application.

**HINT:** If residue has bled onto unwanted surfaces (ex: wheel rims), it can be easily removed with ethyl alcohol.
